

Battery Spill Containment Pans

Leaks shouldn't happen, but when they do, be rest assured the spill is contained and easy to clean up

Our new Battery Spill Pans were specially designed for containment of leaks of stored batteries in substations and other electrical or non-electrical environments.

Our products are always fabricated with the highest quality raw materials, resistant to corrosion, non-conductive, and built to last. Installation is easy, and our spill containment pans are perfect for a variety of applications. The absorbancy pillows you see pictured below and to the right are available for purchase, along with a caulking material to prevent any leakage between pans.

Clean up is easy when your spill is contained.

Call today: 253-884-4008.

EASILY INSTALLED

Our spill pans are a single, solid unit providing you the best protection. If you have an extended battery rack, simply place the pans next to each other. We offer caulking material and absorbant pillows for added protection (additional costs may apply).

HIGH-STRENGTH

High strength-to-weight ratio, built for durability and extended product life.

HIGH LEVEL OF CONTAINMENT

Approx. 4" base lip around perimeter to contain spills

NON-CONDUCTIVE AND CORROSION

ELECTROLYTE ACID RESISTANT
Fiberglass construction provides resistance to corrosion, and prevents conductivity of electrical currents

QUALITY

Marine-grade, gel-coated fiberglass offers a U.V. resistant and non-corrosive, quality product.
